

“Australian plumber’s invention set to revolutionise water billing!”

Additional increased demand on our water supplies due to misappropriation, coupled with antiquated water metering systems has created a billing nightmare!

Are you being billed for someone else’s excessive water use?

*“The vast majority of apartments and units in Australia do not have individual water meters. The total water bill is simply split on a per unit basis based on a reading taken by local authorities at a meter in the street - **extremely unfair!** Careful and low water users are subsidizing wasteful and high water users to the tune of \$1,000’s of dollars. Now there is a low cost solution!”* says Peter McCallum – Managing Director of Bayzone Holdings Pty Ltd.

‘By Australian law, you can’t bill it – if you can’t measure it!’

Unit and apartment residents have little incentive to save water and are racking up huge water bills knowing that they will pay very little extra causing big problems for property owners, managers and body corporates. Water billing is by far the most common issue dealt with by owners and managers.

Arbitrary per unit charging for water use is totally unfair and now unnecessary.

Nearly all multi-unit buildings are unable to individually measure water consumption per unit. To date installing a water meter (per unit) in the traditional way is too hard and expensive but now there is a device that can be retrofitted at a fraction of the cost and no mess.

Licensed plumber Peter McCallum has spent the last 5 years perfecting a revolutionary way to install water meters. His patented and government approved invention the **BayZone QuickFit Water Meter Adapter (QFWMA)** is the solution to this major water usage and unfair billing problem.

Peter has presented his device to industry organisations like the **Plumbing Industry Association of South Australia, Australian Water Association** and the **Master Plumbers Association of Queensland** and at industry tradeshows including the **Strata Community Australia’s National Strata Industry Convention 2012**. The feedback has been overwhelmingly positive.

Government and industry are well aware of this problem and agrees it needs to be seriously addressed but cost has been the problem. The BayZone QFWMA is the long overdue solution and now, highly sought after.

In early May this year, Peter McCallum was invited to the **International Emerging Technology Symposium** www.iapmo.org in Washington DC to present the QuickFit Water Meter Adapter to many of the International Water Board dignitaries and delegates. Their reaction was overwhelming giving Peter a clear indication that this is not just an Australian issue, it’s a global problem.

Retrofitting the BayZone QuickFit Water Meter Adapter cost effectively solves the problem of unfair water charging in apartment blocks and for the first time gives occupants a measurable incentive to save water!
